Ford Targets Fully Autonomous Vehicle for Ride Sharing in 2021; Invests in New Tech Companies, Doubles Silicon Valley Team

- Ford announces intention to deliver high-volume, fully autonomous vehicle for ride sharing in 2021
- Ford investing in or collaborating with four startups on autonomous vehicle development
- Company also doubling Silicon Valley team and more than doubling Palo Alto campus

PALO ALTO, Calif., Aug. 16, 2016 – Ford today announces its intent to have a high-volume, fully autonomous SAE level 4-capable vehicle in commercial operation in 2021 in a ride-hailing or ride-sharing service.

To get there, the company is investing in or collaborating with four startups to enhance its autonomous vehicle development, doubling its Silicon Valley team and more than doubling its Palo Alto campus.

“The next decade will be defined by automation of the automobile, and we see autonomous vehicles as having as significant an impact on society as Ford’s moving assembly line did 100 years ago,” said Mark Fields, Ford president and CEO. “We’re dedicated to putting on the road an autonomous vehicle that can improve safety and solve social and environmental challenges for millions of people – not just those who can afford luxury vehicles.”

Autonomous vehicles in 2021 are part of Ford Smart Mobility, the company’s plan to be a leader in autonomous vehicles, as well as in connectivity, mobility, the customer experience, and data and analytics.

Driving autonomous vehicle leadership

Building on more than a decade of autonomous vehicle research and development, Ford’s first fully autonomous vehicle will be a [Society of Automotive Engineers-defined level 4-capable vehicle](#). Plans are to design it to operate without a steering wheel, gas or brake pedal, for use in commercial mobility services such as ride

sharing and ride hailing within geo-fenced areas and be available in high volumes.

“Ford has been developing and testing autonomous vehicles for more than 10 years,” said Raj Nair, Ford executive vice president, Global Product Development, and chief technical officer. “We have a strategic advantage because of our ability to combine the software and sensing technology with the sophisticated engineering necessary to manufacture high-quality vehicles. That is what it takes to make autonomous vehicles a reality for millions of people around the world.”

This year, Ford will triple its autonomous vehicle test fleet to be the largest test fleet of any automaker – bringing the number to about 30 self-driving Fusion Hybrid sedans on the roads in California, Arizona and Michigan, with plans to triple it again next year.

Ford was the [first automaker to begin testing its vehicles at Mcity](#), University of Michigan’s simulated urban environment, the [first automaker to publicly demonstrate autonomous vehicle operation in the snow](#) and the [first automaker to test its autonomous research vehicles at night](#), in complete darkness, as part of LiDAR sensor development.

To deliver an autonomous vehicle in 2021, Ford is announcing four key investments and collaborations that are expanding its strong research in advanced algorithms, 3D mapping, LiDAR, and radar and camera sensors:

- **Velodyne:** Ford has invested in Velodyne, the Silicon Valley-based leader in light detection and ranging (LiDAR) sensors. The aim is to quickly mass-produce a more affordable automotive LiDAR sensor. Ford has a longstanding relationship with Velodyne, and was among the first to use LiDAR for both high-resolution mapping and autonomous driving beginning more than 10 years ago
- **SAIPS:** Ford has acquired the Israel-based computer vision and machine learning company to further strengthen its expertise in artificial intelligence and enhance computer vision. SAIPS has developed algorithmic solutions in image and video processing, deep learning, signal processing and classification. This expertise will help Ford autonomous vehicles learn and adapt to the surroundings of their environment
- **Nirenberg Neuroscience LLC:** Ford has an exclusive licensing agreement with Nirenberg Neuroscience, a machine vision company founded by neuroscientist Dr. Sheila Nirenberg, who cracked the neural code the eye uses to transmit visual information to the brain. This has led to a powerful machine vision platform for performing navigation, object recognition, facial recognition and other functions, with many potential applications. For example, it is already being applied by Dr. Nirenberg to develop a device for restoring sight to patients with degenerative

diseases of the retina. Ford's partnership with Nirenberg Neuroscience will help bring humanlike intelligence to the machine learning modules of its autonomous vehicle virtual driver system

- **Civil Maps:** Ford has invested in Berkeley, California-based Civil Maps to further develop high-resolution 3D mapping capabilities. Civil Maps has pioneered an innovative 3D mapping technique that is scalable and more efficient than existing processes. This provides Ford another way to develop high-resolution 3D maps of autonomous vehicle environments

Silicon Valley expansion

Ford also is expanding its Silicon Valley operations, creating a dedicated campus in Palo Alto.

Adding two new buildings and 150,000 square feet of work and lab space adjacent to the current Research and Innovation Center, the expanded campus grows the company's local footprint and supports plans to double the size of the Palo Alto team by the end of 2017.

"Our presence in Silicon Valley has been integral to accelerating our learning and deliverables driving Ford Smart Mobility," said Ken Washington, Ford vice president, Research and Advanced Engineering. "Our goal was to become a member of the community. Today, we are actively working with more than 40 startups, and have developed a strong collaboration with many incubators, allowing us to accelerate development of technologies and services."

Since the new [Ford Research and Innovation Center Palo Alto opened in January 2015](#), the facility has rapidly grown to be one of the largest automotive manufacturer research centers in the region. Today, it is home to more than 130 researchers, engineers and scientists, who are increasing Ford's collaboration with the Silicon Valley ecosystem.

Research and Innovation Center Palo Alto's multi-disciplinary research and innovation facility is the newest of nearly a dozen of Ford's global research, innovation, IT and engineering centers. The expanded Palo Alto campus opens in mid-2017.

About Ford Motor Company

[Ford Motor Company](#) is a global automotive and mobility company based in Dearborn, Michigan. With about 203,000 employees and 62 plants worldwide, the company's core business includes designing, manufacturing, marketing and servicing a full line of Ford cars, trucks and SUVs, as well as Lincoln luxury vehicles. To expand its business model, Ford is aggressively pursuing emerging opportunities with investments

in electrification, autonomy and mobility. Ford provides financial services through Ford Motor Credit Company. For more information regarding Ford and its products and services, please visit www.corporate.ford.com.

Risk Factors

This news release and the related presentations contain forward-looking statements. These statements are based on Ford's current expectations for future events. There are risks, uncertainties, and other factors that could cause actual results to differ materially from those stated, including: lower-than-anticipated market acceptance of new or existing products or services; discovery of defects in vehicles resulting in delays in new model launches, recall campaigns or increased warranty costs; increased regulations; and cybersecurity risks. For additional information about these risks, see Ford's 2015 Form 10-K report, as updated by Ford's Form 10-Q and Form 8-K reports.
